<b>Background</b>	Inducible co-stimulator ligand (ICOSL); also known as B7-H2; is a member of the B7 family of co-stimulatory molecules related to B7-1 and B7-2. The protein is the ligand for the T-cell-specific cell surface receptor ICOS. Acts as a costimulatory signal for T-cell proliferation and cytokine secretion; induces also B-cell proliferation and differentiation into plasma cells. Could play an important role in mediating local tissue responses to inflammatory conditions; as well as in modulating the secondary immune response by co-stimulating memory T-cell function.
<b>Usage</b>	Research use only
<b>Conjugate</b>	Unconjugated

Figure 1. ELISA plate pre-coated by 2 µg/ml (100 µl/well) Human B7-H2 protein, mFc-His tagged protein PME100029 can bind Rabbit anti-B7-H2 monoclonal antibody ( clone: DM98) in a linear range of 3.2-80 ng/ml.

Figure 2. Flow cytometry analysis with Anti-B7-H2 ( DM98) on Expi293 cells transfected with human B7-H2 ( Blue histogram) or Expi293 transfected with irrelevant protein ( Red histogram).

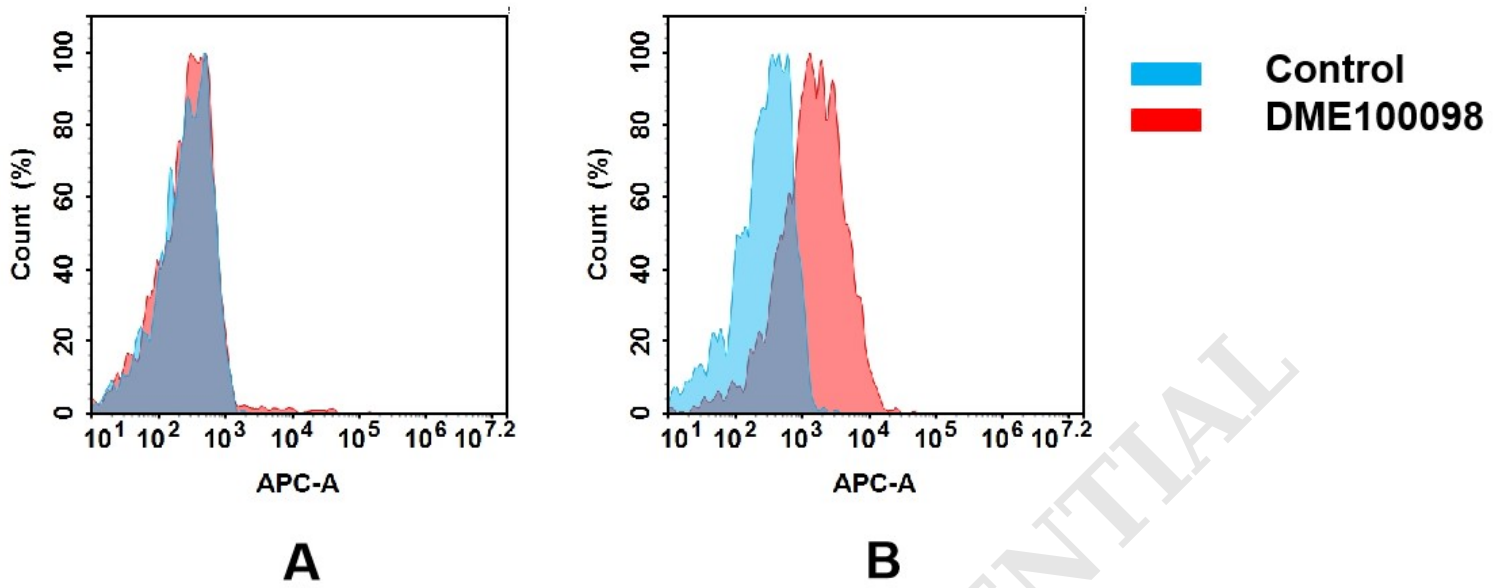

Figure 3. Flow cytometry analysis of antigen binding of rabbit anti-human B7-H2 mAb(DME100098).

(A) DME100098 does not bind to Jurkat cells that do not express B7-H2.

(B) A clear peak shift of DME100098 was seen compared to the control when incubated with B7-H2-expressing Raji cells, indicating strong binding of DME100098 to B7-H2. Antibodies were incubated at 5 µg/mL.
