<b>Background</b>	This gene is a member of the cadherin superfamily, genes encoding calcium-dependent, membrane-associated glycoproteins. The encoded protein is cadherin-like, consisting of an extracellular region, containing 7 cadherin domains, and a transmembrane region but lacking the conserved cytoplasmic domain. The protein is a component of the gastrointestinal tract and pancreatic ducts, acting as an intestinal proton-dependent peptide transporter in the first step in oral absorption of many medically important peptide-based drugs. The protein may also play a role in the morphological organization of liver and intestine. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jan 2009]

Figure 1. Anti-CDH17 antibody (SKU# DMC100637) at 1/1000 dilution

Lane 1: AGS, whole cell lysate  
Lane 2: HT55, whole cell lysate

Secondary : Goat Anti-Rabbit IgG H&L (HRP) at 1/5000 dilution

Predicted band size: 92 kDa  
Observed band size: 120 kDa

Figure 2. Flow cytometry analysis of antigen binding of anti-human CDH17 mAb(DMC100637).

(A) DMC100637 does not bind to 293T cells that do not express CDH17

(B) A clear peak shift of DMC100637 was seen compared to the control when incubated with CDH17 -expressing HT55 cells, indicating strong binding of DMC100637 to CDH17.

Antibodies were incubated at 2ug/mL.
