

PRODUCT INFORMATION

Clone ID 2H1 A35R **Target** A35R **Synonyms Host Species** Rabbit

Anti-Monkeypox virus A35R antibody(2H1), Rabbit Description

mAb **Delivery** In Stock **Uniprot ID** Q8V4U4 Rabbit IgG IgG type Clonality Monoclonal

Reactivity Monkeypox virus

Applications ELISA

Recommended ELISA 1/5000-10000 **Dilutions**

Purified from cell culture supernatant by affinity **Purification**

chromatography

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation & - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Reconstitution

for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

Monkeypox is a rare zoonosis caused by monkeypox virus, which has become the most serious orthpoxvirus and consists of complex double stranded DNA. The cases are mostly in central and western Africa. The pathogenesis of monkeypox is that the virus invades the body

Background

from respiratory mucosa, multiplies in lymphocytes, and incurs into blood producing transient venereal toxemia. after the virus multiplies in cells, the cells can invade the blood and propagate to the skin of the whole body, causing lesions. The envelope glycoprotein A35R on the EV surface has been predicted to influence interest luter diffusion of virians.

intercellular diffusion of virions.

Usage Research use only Conjugate Unconjugated

Anti-A35R (2H1) mAb ELISA 0.1µg of Human A35R, His tagged protein per well

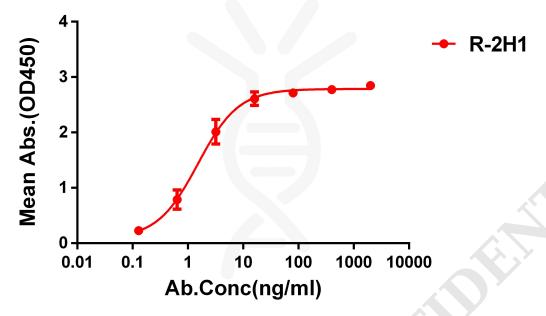

Figure 1. ELISA plate pre-coated by 1 μ g/ml (100 μ l/well) Human A35R Protein can bind Rabbit anti-A35R monoclonal antibody(clone: 2H1) in a linear range of 1-10 ng/ml.
