

## **PRODUCT INFORMATION**

ADAM9 **Target** 

**Synonyms** CORD9;MCMP;MDC9;Mltng

Recombinant Cynomolgus ADAM9 protein with C-**Description** 

terminal 6×His tag

**Delivery** In Stock

**Uniprot ID** A0A2K5X4X8

**Expression Host HEK293** 

Tag C-6×His Tag

Molecular

**Molecular Weight** 

Reconstitution

**Background** 

ADAM9(Ala29-Gly698) 6×His tag Characterization

The protein has a predicted molecular mass of

74.9 kDa after removal of the signal peptide. The apparent molecular mass of cADAM9-His is approximately 55-100 kDa due to glycosylation.

The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation &

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a member of the ADAM (a disintegrin and metalloprotease domain) family. Members of this family are membrane-anchored proteins structurally related to snake venom disintegrins, and have been implicated in a variety of biological processes involving cell-cell and cell-matrix interactions, including fertilization, muscle development, and neurogenesis. The

protein encoded by this gene interacts with SH3 domain-containing proteins, binds mitotic arrest deficient 2 beta protein, and is also involved in TPA-induced ectodomain shedding of membraneanchored heparin-binding EGF-like growth factor. Several alternatively spliced transcript variants have been identified for this gene. [provided by
