

PRODUCT INFORMATION

ALPP Target

ALP; IAP; ALPI; PALP; PLAP; PLAP-1 **Synonyms**

Recombinant Cynomolgus ALPP protein with C-**Description**

terminal 10×His tag

Delivery In Stock

Uniprot ID XP_045223825.1

Expression Host HFK293

Tag C-10×His tag

ALPP(Ile21-Asp504) 10×His tag Characterization

The protein has a predicted molecular mass of

54.1 kDa after removal of the signal peptide. The apparent molecular mass of cALPP-His is **Molecular Weight**

approximately 55-70 kDa due to glycosylation.

The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

Purity staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation &

8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

for specific instructions.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store

at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene is an alkaline phosphatase, a metalloenzyme that catalyzes the hydrolysis of phosphoric acid monoesters. It belongs to a multigene family composed of four alkaline phosphatase isoenzymes. The enzyme functions as a homodimer and has a catalytic site containing one magnesium and two zinc ions,

which are required for its enzymatic function. One of the main sources of this enzyme is the liver, and thus, it's one of several indicators of liver injury in different clinical conditions. In pregnant

women, this protein is primarily expressed in placental and endometrial tissue, however, strong ectopic expression has been detected in ovarian adenocarcinoma, serous cystadenocarcinoma, and other ovarian cancer cells. [provided by

RefSeq, Aug 2020]

Usage Research use only

Conjugate Unconjugated
