

## **PRODUCT INFORMATION**

AXL **Target** 

**Synonyms** ARK; UFO; AXL3; JTK11; Tyro7

Recombinant Cynomolgus AXL protein with C-**Description** 

terminal 10×His tag

**Delivery** In Stock

**Uniprot ID** A0A2K5WXE0

**Expression Host HEK293** 

Tag C-10×His tag

Molecular

**Background** 

AXL(Glu33-Pro449) 10×His tag Characterization

The protein has a predicted molecular mass of

46.5 kDa after removal of the signal peptide. The apparent molecular mass of cAXL-His is **Molecular Weight** 

approximately 55-70 kDa due to glycosylation.

The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene is a member of the Tyro3-Axl-Mer (TAM) receptor tyrosine kinase subfamily. The encoded protein possesses an extracellular domain which is composed of two immunoglobulin-like motifs at the N-terminal, followed by two fibronectin type-III motifs. It transduces signals from the extracellular matrix into the cytoplasm by binding to the vitamin Kdependent protein growth arrest-specific 6

(Gas6). This gene may be involved in several cellular functions including growth, migration, aggregation and anti-inflammation in multiple cell types. The encoded protein acts as a host cell receptor for multiple viruses, including Marburg, Ebola and Lassa viruses and is a candidate receptor for the SARS-CoV2 virus. [provided by RefSeq, Sep 2021]
