

PRODUCT INFORMATION

CD93 **Target**

Synonyms ClqR;ClqR(p);ClqRp;CDw93

Recombinant Cynomolgus CD93 protein with C-**Description**

terminal 6×His tag

Delivery In Stock

Uniprot ID A0A2K5VH53

Expression Host HEK293

Tag C-6×His Tag

Molecular

Reconstitution

CD93(Ala24-Leu581) 6×His tag Characterization

The protein has a predicted molecular mass of **Molecular Weight**

59.2 kDa after removal of the signal peptide. The apparent molecular mass of cCD93-His is

approximately 70-130 kDa due to glycosylation.

The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation &

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping

at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene is a cell-surface glycoprotein and type I membrane protein that was originally identified as a myeloid cell-specific marker. The encoded protein was once thought to be a receptor for C1q, but now is thought to instead be involved in intercellular adhesion and in the clearance of appoint to it is the clearance of appoint to it is false.

Background

intracellular cytoplasmic tail of this protein has been found to interact with moesin, a protein known to play a role in linking transmembrane

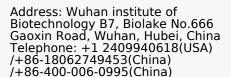

proteins to the cytoskeleton and in the remodelling of the cytoskeleton. [provided by

RefSeq, Jul 2008]

Usage Research use only

Conjugate Unconjugated
