Human 4-1BB(87-118) Protein, hFc Tag Cat. No. PME101702

## **PRODUCT INFORMATION**

| Target                          | 4-1BB   |
|---------------------------------|---|
| Synonyms                        | ILA; TNFRSF9; CD137; CDw137; IMD109   |
| Description                     | Recombinant human 4-1BB(87-118) Protein with<br>C-terminal human Fc tag   |
| Delivery                        | In Stock  |
| Uniprot ID                      | Q07011  |
| Expression Host                 | HEK293  |
| Тад                             | C-Human Fc tag  |
| Molecular<br>Characterization   | 4-1BB(Asp87-Lys118) hFc(Glu99-Ala330)   |
| Molecular Weight                | The protein has a predicted molecular mass of<br>29.5 kDa after removal of the signal peptide. The<br>apparent molecular mass of 4-1BB(87-118)-hFc is<br>approximately 25-35 kDa due to glycosylation.  |
| Purity                          | The purity of the protein is greater than 90% as determined by SDS-PAGE and Coomassie blue staining.  |
| Formulation &<br>Reconstitution | Lyophilized from sterile PBS, pH 7.4. Normally 5 %<br>– 8% trehalose is added as protectants before<br>lyophilization. Please see Certificate of Analysis<br>for specific instructions of reconstitution.   |
| Storage & Shipping              | Store at -20°C to -80°C for 12 months in<br>lyophilized form. After reconstitution, if not<br>intended for use within a month, aliquot and store<br>at -80°C (Avoid repeated freezing and thawing).<br>Lyophilized proteins are shipped at ambient<br>temperature.  |
| Background                      | The protein encoded by this gene is a member of<br>the TNF-receptor superfamily. This receptor<br>contributes to the clonal expansion, survival, and<br>development of T cells. It can also induce<br>proliferation in peripheral monocytes, enhance T<br>cell apoptosis induced by TCR/CD3 triggered<br>activation, and regulate CD28 co-stimulation to<br>promote Th1 cell responses. The expression of<br>this receptor is induced by lymphocyte activation.<br>TRAF adaptor proteins have been shown to bind<br>to this receptor and transduce the signals leading<br>to activation of NF-kappaB. [provided by RefSeq,<br>Jul 2008] |
| Usage                           | Research use only   |
| Conjugate                       | Unconjugated  |
|                                 |   |
