Cat. No. FLP100167

PRODUCT INFORMATION

Tag C-Flag Tag **Target** 5HT2B

Synonyms 5-HT(2B), 5-HT-2B, 5-HT2B

Human 5HT2B full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** P41595 **Expression Host HEK293**

Formulation & Reconstitution

Storage & Shipping

Protein Families Transmembrane, Druggable Genome,

GPCRDB Class A Rhodopsin-like, Monoamine **Protein Pathways**

GPCRs,

The human full length 5HT2B protein has a MW of **Molecular Weight**

54.3kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes one of the several different receptors for 5-hydroxytryptamine (serotonin) that belongs to the G-protein coupled receptor 1 family. Serotonin is a biogenic hormone that functions as a neurotransmitter, a hormone, and a mitogen. Serotonin receptors mediate many of the central and peripheral physiologic functions of serotonin, including regulation of cardiovascular functions and impulsive behavior. Population and

Background family-based analyses of a minor allele

(glutamine-to-stop substitution, designated Q20*) which blocks expression of this protein, and knockout studies in mice, suggest a role for this gene in impulsivity. However, other factors, such as elevated testosterone levels, may also be involved. Alternatively spliced transcript variants have been found for this gene. [provided by

RefSeq, Mar 2016]

Usage Research use only

Conjugate Unconjugated
