

## **PRODUCT INFORMATION**

**Tag** C-Flag Tag

Target AA1R Synonyms RDC7

**Expression Host** 

Formulation &

Reconstitution

Storage & Shipping

**Background** 

**Description**Human AA1R full length protein-synthetic

nanodisc

Delivery 6~8weeks

Uniprot ID P30542

**Protein Families** GPCR,Transmembrane,Druggable Genome,

**Protein Pathways** GPCRDB Class A Rhodopsin-like, Nucleotide GPCRs, Apoptosis, Metabolic and Obesity,

Molecular Weight The human full length AA1R protein has a MW of

36.5kDa

**HEK293** 

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene is an adenosine receptor that belongs to the G-protein coupled receptor 1 family. There are 3 types of adenosine receptors, each with a specific pattern of ligand binding and tissue distribution, and together they regulate a diverse set of physiologic functions. The type A1 receptors inhibit adenylyl cyclase, and play a role in the fertilization process. Animal studies also suggest a role for A1 receptors in

kidney function and ethanol intoxication. Transcript variants with alternative splicing in the 5' UTR have been found for this gene. [provided
