

PRODUCT INFORMATION

C-Flag Tag Tag

Target ACM1

Expression Host

Storage & Shipping

Background

Synonyms HM1, M1, M1R

Human ACM1 full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** P11229

Protein Families GPCR, Transmembrane, Druggable Genome,

Calcium regulation in cardiac cells, GPCRDB Class A Rhodopsin-like, Monoamine GPCRs, Regulation of **Protein Pathways**

Actin Cytoskeleton KEGG,

The human full length ACM1 protein has a MW of **Molecular Weight**

51.4kDa

HEK293

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in

lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

The muscarinic cholinergic receptors belong to a larger family of G protein-coupled receptors. The functional diversity of these receptors is defined by the binding of acetylcholine and includes cellular responses such as adenylate cyclase inhibition, phosphoinositide degeneration, and potassium channel mediation. Muscarinic receptors influence many effects of acetylcholine

in the central and peripheral nervous system. The muscarinic cholinergic receptor 1 is involved in mediation of vagally-induced bronchoconstriction and in the acid secretion of the gastrointestinal tract. The gene encoding this receptor is localized

to 11q13. [provided by KefSeq, Jul 2008]

Usage Research use only Conjugate Unconjugated
