

PRODUCT INFORMATION

C-Flag Tag Tag **Target** ADA1A

Synonyms ADRA1C, ADRA1L1, ALPHA1AAR

Human ADA1A full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** P35348 **Expression Host HEK293**

Protein Families GPCR, Transmembrane, Druggable Genome,

Calcium regulation in cardiac cells, GPCRDB Class

A Rhodopsin-like, Monoamine GPCRs, Apoptosis, Cancer, Cell Cycle, **Protein Pathways**

The human full length ADA1A protein has a MW of **Molecular Weight**

51.5kDa

Formulation & Reconstitution

Storage & Shipping

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

Alpha-1-adrenergic receptors (alpha-1-ARs) are members of the G protein-coupled receptor superfamily. They activate mitogenic responses and regulate growth and proliferation of many cells. There are 3 alpha-1-AR subtypes: alpha-1A, -1B and -1D, all of which signal through the Gq/11 family of G-proteins and different subtypes show

Background different patterns of activation. This gene encodes alpha-1A-adrenergic receptor.

Alternative splicing of this gene generates four transcript variants, which encode four different isoforms with distinct C-termini but having similar ligand binding properties. [provided by RefSeq, Jul

Usage Research use only Conjugate Unconjugated
