

## **PRODUCT INFORMATION**

C-Flag Tag Tag

**Target** ASIC2

ACCN, ACCN1, ASIC2a, BNC1, BNaC1, MDEG, **Synonyms** 

hBNaC1

Human ASIC2 full length protein-synthetic Description

nanodisc 6~8weeks

**Delivery Uniprot ID** Q16515 **HEK293 Expression Host** 

**Protein Families** Ion Channels: Other

**Protein Pathways** 

Formulation & Reconstitution

Storage & Shipping

**Background** 

The human full length ASIC2 protein has a MW of **Molecular Weight** 

57.7kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a member of the degenerin/epithelial sodium channel (DEG/ENaC) superfamily. The members of this family are amiloride-sensitive sodium channels that contain intracellular N and C termini, 2 hydrophobic transmembrane regions, and a large extracellular loop, which has many cysteine residues with conserved spacing. The member encoded by this

gene may play a role in neurotransmission. In addition, a heteromeric association between this member and acid-sensing (proton-gated) ion channel 3 has been observed to co-assemble into proton-gated channels sensitive to gadolinium. Alternative splicing has been observed at this locus and two variants, encoding distinct isoforms, have been identified. [provided by RefSeq, Feb 2012]
