Human AXL(26-92) Protein, hFc Tag Cat. No. PME101583

## **PRODUCT INFORMATION**

| Target                          | AXL   |
|---------------------------------|---|
| Synonyms                        | ARK; UFO; AXL3; JTK11; Tyro7  |
| Description                     | Recombinant human AXL(26-92) Protein with C-<br>terminal human Fc tag   |
| Delivery                        | In Stock  |
| Uniprot ID                      | P30530  |
| <b>Expression Host</b>          | HEK293  |
| Tag                             | C-Human Fc tag  |
| Molecular<br>Characterization   | AXL(Ala26-Glu92) hFc(Glu99-Ala330)  |
| Molecular Weight                | The protein has a predicted molecular mass of<br>33.3 kDa after removal of the signal peptide. The<br>apparent molecular mass of AXL(26-92)-hFc is<br>approximately 35-55 kDa due to glycosylation.   |
| Purity                          | The purity of the protein is greater than 95% as<br>determined by SDS-PAGE and Coomassie blue<br>staining.  |
| Formulation &<br>Reconstitution | Lyophilized from sterile PBS, pH 7.4. Normally 5 %<br>– 8% trehalose is added as protectants before<br>lyophilization. Please see Certificate of Analysis<br>for specific instructions of reconstitution.   |
| Storage & Shipping              | Store at -20°C to -80°C for 12 months in<br>lyophilized form. After reconstitution, if not<br>intended for use within a month, aliquot and store<br>at -80°C (Avoid repeated freezing and thawing).<br>Lyophilized proteins are shipped at ambient<br>temperature.  |
| Background                      | The protein encoded by this gene is a member of<br>the Tyro3-Axl-Mer (TAM) receptor tyrosine kinase<br>subfamily. The encoded protein possesses an<br>extracellular domain which is composed of two<br>immunoglobulin-like motifs at the N-terminal,<br>followed by two fibronectin type-III motifs. It<br>transduces signals from the extracellular matrix<br>into the cytoplasm by binding to the vitamin K-<br>dependent protein growth arrest-specific 6<br>(Gas6). This gene may be involved in several<br>cellular functions including growth, migration,<br>aggregation and anti-inflammation in multiple cell<br>types. The encoded protein acts as a host cell<br>receptor for multiple viruses, including Marburg,<br>Ebola and Lassa viruses and is a candidate<br>receptor for the SARS-CoV2 virus. [provided by<br>RefSeq, Sep 2021] |
| Usage                           | Research use only   |
| Conjugate                       | Unconjugated  |
