

## **PRODUCT INFORMATION**

| Тад                             | C-Flag Tag  |
|---------------------------------|---|
| Target                          | C3AR  |
| Synonyms                        | AZ3B, C3AR, HNFAG09   |
| Description                     | Human C3AR full length protein-synthetic<br>nanodisc  |
| Delivery                        | 6~8weeks  |
| Uniprot ID                      | Q16581  |
| Expression Host                 | HEK293  |
| <b>Protein Families</b>         | GPCR,Transmembrane,Druggable Genome,  |
| Protein Pathways                | GPCRDB Class A Rhodopsin-like,Peptide GPCRs,  |
| Molecular Weight                | The human full length C3AR protein has a MW of 53.9kDa  |
| Formulation &<br>Reconstitution | Lyophilized from nanodisc solubilization buffer (20<br>mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5%<br>- 8% trehalose is added as protectants before<br>lyophilization. Please see Certificate of Analysis<br>for specific instructions. Do not use solvents with<br>a pH below 6.5 or those containing high<br>concentrations of divalent metal ions (greater<br>than 5 mM) in subsequent experiments. |
| Storage & Shipping              | Store at -20°C to -80°C for 12 months in<br>lyophilized form. After reconstitution, if not<br>intended for use within a month, aliquot and store<br>at -80°C (Avoid repeated freezing and thawing).<br>Lyophilized proteins are shipped at ambient<br>temperature.  |
| Background                      | C3a is an anaphylatoxin released during<br>activation of the complement system. The protein<br>encoded by this gene is an orphan G protein-<br>coupled receptor for C3a. Binding of C3a by the<br>encoded receptor activates chemotaxis, granule<br>enzyme release, superoxide anion production,<br>and bacterial opsonization. [provided by RefSeq,<br>May 2016]   |
| Usage                           | Research use only   |
| Conjugate                       | Unconjugated  |
|                                 |   |
