

PRODUCT INFORMATION

C-Flag Tag Tag CACB1 **Target**

Synonyms CAB1, CACNLB1, CCHLB1

Human CACB1 full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** Q02641 **Expression Host HEK293**

Protein Families Ion Channels: Other

Protein Pathways N/A

Formulation &

Storage & Shipping

Background

The human full length CACB1 protein has a MW of **Molecular Weight**

65.7kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

Reconstitution for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

témperature.

The protein encoded by this gene belongs to the calcium channel beta subunit family. It plays an important role in the calcium channel by modulating G protein inhibition, increasing peak calcium current, controlling the alpha-1 subunit membrane targeting and shifting the voltage dependence of activation and inactivation. Alternative splicing occurs at this locus and three transcript variants opending three distinct

transcript variants encoding three distinct isoforms have been identified. [provided by

RefSeq, Jul 2008]

Usage Research use only

Conjugate Unconjugated
