Delivery

Background

PRODUCT INFORMATION

Target CACB1

Synonyms CAB1, CACNLB1, CCHLB1

Human CACB1 full length protein-synthetic **Description**

nanodisc 6~8weeks

Uniprot ID Q02641 **Expression Host HEK293**

Protein Families Ion Channels: Other

Protein Pathways

The human full length CACB1 protein has a MW of **Molecular Weight**

65.7kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trial-balose is added as protectants before Formulation & Reconstitution lyophilization. Please see Certificate of Analysis

for specific instructions. Do not use solvents with pH lower than 6.5 in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

Storage & Shipping at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene belongs to the calcium channel beta subunit family. It plays an

important role in the calcium channel by modulating G protein inhibition, increasing peak calcium current, controlling the alpha-1 subunit membrane targeting and shifting the voltage dependence of activation and inactivation.

Alternative splicing occurs at this locus and three transcript variants encoding three distinct is a specified to the specified three distinct is a specified to the specifie
