

PRODUCT INFORMATION

C-Flag&Strep Tag Tag

Target CALCR

Expression Host

Formulation & Reconstitution

Synonyms CRT, CT-R, CTR, CTR1

Human CALCR-Strep full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** P30988

Protein Families GPCR, Transmembrane, Druggable Genome,

GPCRDB Class B Secretin-like, G-Protein Coupled **Protein Pathways**

Receptors Signaling Pathway,

The human full length CALCR-Strep protein has a **Molecular Weight**

MW of 55.3kDa

HEK293

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a high affinity receptor for the peptide hormone calcitonin and belongs to a subfamily of seven transmembrane-spanning G protein-coupled receptors. The encoded protein is involved in maintaining calcium homeostasis and in regulating osteoclast-mediated bone resorption. Polymorphisms in this gene have been

Background

associated with variations in bone mineral density and onset of osteoporosis. Alternate splicing results in multiple transcript variants. [provided

by RefSeq, Sep 2009]

Usage Research use only

Unconjugated Conjugate
