Formulation &

Reconstitution

Background

PRODUCT INFORMATION

Tag C-Flag Tag

Target CASR

CAR, EIG8, FHH, FIH, GPRC2A, HHC, HHC1, **Synonyms**

HYPOC1, NSHPT, PCAR1, hCasR

Human CASR full length protein-synthetic Description

nanodisc 6~8weeks

Uniprot ID P41180 **Expression Host HEK293**

Protein Families GPCR, Transmembrane, Druggable Genome,

GPCRDB Class C Metabotropic glutamate pheromone, Apoptosis, G-Protein Coupled Receptors Signaling Pathway, Osteogenesis, **Protein Pathways**

The human full length CASR protein has a MW of **Molecular Weight**

120.7kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater

than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Storage & Shipping

Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene is a plasma membrane G protein-coupled receptor that senses small changes in circulating calcium concentration. The encoded protein couples this information to intracellular signaling pathways that modify parathyroid hormone secretion or renal cation handling, and thus this protein plays an essential role in maintaining mineral ion

homeostasis. Mutations in this gene are a cause of familial hypocalciuric hypercalcemia, neonatal severe hyperparathyroidism, and autosomal dominant hypocalcemia. [provided by RefSeq,
