

## **PRODUCT INFORMATION**

C-Flag&Strep Tag Tag

**CASR Target** 

CAR, EIG8, FHH, FIH, GPRC2A, HHC, HHC1, **Synonyms** 

HYPOC1, NSHPT, PCAR1, hCasR

Human CASR-Strep full length protein-synthetic Description

nanodisc

**Delivery** 6~8weeks **Uniprot ID** P41180 **Expression Host HEK293** 

Storage & Shipping

**Background** 

**Protein Families** GPCR, Transmembrane, Druggable Genome,

GPCRDB Class C Metabotropic glutamate pheromone, Apoptosis, G-Protein Coupled Receptors Signaling Pathway, Osteogenesis, **Protein Pathways** 

The human full length CASR-Strep protein has a **Molecular Weight** 

MW of 120.7 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before

Formulation & lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with Reconstitution

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene is a plasma membrane G protein-coupled receptor that senses small changes in circulating calcium concentration. The encoded protein couples this information to intracellular signaling pathways that modify parathyroid hormone secretion or renal cation handling, and thus this protein plays an essential role in maintaining mineral ion

homeostasis. Mutations in this gene are a cause of familial hypocalciuric hypercalcemia, neonatal severe hyperparathyroidism, and autosomal dominant hypocalcemia. [provided by RefSeg,
