

PRODUCT INFORMATION

C-Flag&Strep Tag Tag

CD37 Target

Expression Host

Storage & Shipping

Background

Synonyms GP52-40; TSPAN26

Human CD37-Strep full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** P11049

Protein Families Transmembrane

Protein Pathways Hematopoietic cell lineage

HEK293

The human full length CD37-Strep protein has a **Molecular Weight**

MW of 31.7 kDa

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in

Lyophilized from nanodisc solubilization buffer (20

lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

témperature.

The protein is a member of the transmembrane 4 superfamily, also known as the tetraspanin family. Most of these members are cell-surface proteins that are characterized by the presence of four hydrophobic domains. The proteins mediate signal transduction events that play a role in the

regulation of cell development, activation, growth and motility. This encoded protein is a cell surface glycoprotein that is known to complex with

integrins and other transmembrane 4 superfamily proteins. It may play a role in T-cell-B-cell interactions. Alternate splicing results in multiple transcript variants encoding different isoforms.

Research use only **Usage** Conjugate Unconjugated
