

PRODUCT INFORMATION

Tag C-Flag&Strep Tag

Target CLCN4

Synonyms CLC4, ClC-4A, MRX15, MRX49, MRXSRC

DescriptionHuman CLCN4-Strep full length protein-synthetic

Delivery 6~8weeks
Uniprot ID P51793

Protein Families Ion Channels: Other

Protein Pathways N/A

Expression Host

Background

Molecular Weight

The human full length CLCN4-Strep protein has a

MW of 84.9 kDa Lyophilized from nanodisc solubilization buffer (20

HEK293

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5%
– 8% trehalose is added as protectants before
lyophilization. Please see Certificate of Analysis
for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

Storage & Shipping intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

The CLCN family of voltage-dependent chloride channel genes comprises nine members (CLCN1-7, Ka and Kb) which demonstrate quite diverse functional characteristics while sharing significant sequence homology. Chloride channel 4 has an evolutionary conserved CpG island and is conserved in both mouse and hamster. This gene is mapped in close proximity to APXL (Apical protein Xenopus laevis-like) and OA1 (Ocular

albinism type I), which are both located on the human X chromosome at band p22.3. The physiological role of chloride channel 4 remains unknown but may contribute to the pathogenesis of neuronal disorders. Alternate splicing results in two transcript variants that encode different proteins. [provided by RefSeq, Mar 2012]
