

PRODUCT INFORMATION

Tag C-Flag&Strep Tag

Target CRFM7

Synonyms CHRNA7, CHRNA7-DR1, D-10, NACHRA7

DescriptionHuman CRFM7-Strep full length protein-synthetic

nanodisc

Delivery 6~8weeks

Uniprot ID Q494W8

Expression Host HEK293

Protein Families Ion Channels: Other

Protein Pathways N/A

Formulation & Reconstitution

Background

Molecular Weight

The human full length CRFM7-Strep protein has a

MW of 46.2 kDa

mM Tris-HCI, 150 mM NaCl, pH 8.0). Normally 5%

- 8% trehalose is added as protectants before
lyophilization. Please see Certificate of Analysis
for specific instructions. Do not use solvents with
a pH below 6.5 or those containing high

concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

Lyophilized from nanodisc solubilization buffer (20

Storage & Shipping at -80°C (Avoid repeated freezing and thawing).
Lyophilized proteins are shipped at ambient

temperature.

The nicotinic acetylcholine receptors (nAChRs) are members of a superfamily of ligand-gated ion channels that mediate fast signal transmission at synapses. The family member CHRNA7, which is located on chromosome 15 in a region associated with several neuropsychiatric disorders, is partially duplicated and forms a hybrid with a novel gene from the family with sequence similarity 7 (FAM7A). Alternative splicing has been observed, and two variants exist, for this hybrid

observed, and two variants exist, for this hybrid gene. The N-terminally truncated products predicted by the largest open reading frames for each variant would lack the majority of the neurotransmitter-gated ion-channel ligand binding domain but retain the transmembrane region that forms the ion channel. Although

current evidence supports transcription of this hybrid gene, translation of the nicotinic acetylcholine receptor-like protein-encoding open reading frames has not been confirmed.
