Formulation & Reconstitution

Storage & Shipping

**Background** 

## **PRODUCT INFORMATION**

C-Flag&Strep Tag Tag

CRFR2 **Target** 

**Synonyms** CRF-RB, CRF2, CRFR2, HM-CRF

Human CRFR2-Strep full length protein-synthetic **Description** 

nanodisc **Delivery** 6~8weeks **Uniprot ID** Q13324 **Expression Host HEK293** 

**Protein Families** Transmembrane, Druggable Genome,

GPCRDB Class B Secretin-**Protein Pathways** 

like, Apoptosis, Neurotrophin & Receptors.

The human full length CRFR2-Strep protein has a **Molecular Weight** 

MW of 47.7 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

The protein encoded by this gene belongs to the G-protein coupled receptor 2 family, and the subfamily of corticotropin releasing hormone receptor. This receptor shows high affinity for corticotropin releasing hormone (CRH), and also binds CRH-related peptides such as urocortin. CRH is synthesized in the hypothalians, and plays an important role in coordinating the endocrine, autonomic, and behavioral responses

to stress and immune challenge. Studies in mice suggest that this receptor maybe involved in mediating cardiovascular homeostasis.

Alternatively spliced transcript variants encoding different isoforms have been described for this
