

## **PRODUCT INFORMATION**

**Tag** C-Flag Tag

Target CXB1

Synonyms CMTX, CMTX1, CX32

**Description**Human CXB1 full length protein-synthetic

Delivery nanodisc

Delivery 6~8weeks

Uniprot ID P08034

**Expression Host** HEK293

**Protein Families** Ion Channels: Other

Protein Pathways N/A

Storage & Shipping

**Background** 

Molecular Weight

The human full length CXB1 protein has a MW of

32kDa Lyophilized from nanodisc solubilization buffer (20

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5%
– 8% trehalose is added as protectants before
lyophilization. Please see Certificate of Analysis
for specific instructions. Do not use solvents with

**Reconstitution**for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments.

Store at -20°C to -80°C for 12 months in

lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

témperature.

This gene encodes a member of the gap junction protein family. The gap junction proteins are membrane-spanning proteins that assemble to form gap junction channels that facilitate the transfer of ions and small molecules between cells. According to sequence similarities at the nucleotide and amino acid levels, the gap junction proteins are divided into two categories,

junction proteins are divided into two categories, alpha and beta. Mutations in this gene cause X-linked Charcot-Marie-Tooth disease, an inherited peripheral neurons and all the companies to protein the companies.

Email: info@dimabio.com Website: www.dimabio.com

transcript variants encoding the same protein have been found for this gene. [provided by

RefSeq, Oct 2008]
Usage Research use only
Conjugate Unconjugated
