**Delivery** 

## **PRODUCT INFORMATION**

**Target** DRD1

DADR, DRD1A **Synonyms** 

Human DRD1 full length protein-synthetic **Description** 

nanodisc 6~8weeks

**Uniprot ID** P21728 **Expression Host HEK293** 

Storage & Shipping

**Background** 

**Protein Families** GPCR, Transmembrane, Druggable Genome,

GPCRDB Class A Rhodopsin-like, Monoamine GPCRs, G-Protein Coupled Receptors Signaling **Protein Pathways** 

Pathway,

The human full length DRD1 protein has a MW of **Molecular Weight** 

49.3kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% Formulation & 8% trehalose is added as protectants before Reconstitution lyophilization. Please see Certificate of Analysis

for specific instructions. Do not use solvents with pH lower than 6.5 in subsequent experiments. Store at -20°C to -80°C for 12 months in

lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

This gene encodes the D1 subtype of the dopamine receptor. The D1 subtype is the most abundant dopamine receptor in the central nervous system. This G-protein coupled receptor stimulates adenylyl cyclase and activates cyclic AMP-dependent protein kinases. D1 receptors regulate neuronal growth and development,

mediate some behavioral responses, and modulate dopamine receptor D2-mediated events. Alternate transcription initiation sites result in two transcript variants of this gene.
