

PRODUCT INFORMATION

Tag C-Flag Tag **EDNRB Target**

ABCDS, ET-B, ET-BR, ETB, ETB1, ETBR, ETRB, **Synonyms**

HSCR, HSCR2, WS4A

Human EDNRB full length protein-synthetic Description

nanodisc

Delivery 6~8weeks **Uniprot ID** P24530 **Expression Host HEK293**

Storage & Shipping

Background

Protein Families GPCR, Transmembrane, Druggable Genome,

GPCRDB Class A Rhodopsin-like, Peptide

GPCRs, Prostaglandin synthesis **Protein Pathways**

regulation, Angiogenesis, Cancer, Endothelial Cell

Biology,

The human full length EDNRB protein has a MW of **Molecular Weight**

49.6kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

Formulation & Reconstitution for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature

The protein encoded by this gene is a G protein-coupled receptor which activates a

phosphatidylinositol-calcium second messenger system. Its ligand, endothelin, consists of a family of three potent vasoactive peptides: ET1, ET2, and ET3. Studies suggest that the multigenic disorder, Hirschsprung disease type 2, is due to mutations in the endothelin receptor type B gene.

Alternative splicing and the use of alternative promoters results in multiple transcript variants. [provided by RefSeq, Oct 2016]

Usage Research use only Conjugate Unconjugated
