

## **PRODUCT INFORMATION**

| Тад                             | C-Flag&Strep Tag  |
|---------------------------------|---|
| 5                               |   |
| Target                          | ENTPD2  |
| Synonyms                        | CD39L1; NTPDase-2   |
| Description                     | Human ENTPD2-Strep full length protein-synthetic<br>nanodisc  |
| Delivery                        | 6~8weeks  |
| Uniprot ID                      | Q9Y5L3  |
| Expression Host                 | HEK293  |
| <b>Protein Families</b>         | Transmembrane   |
| Protein Pathways                | Purine metabolism   |
| Molecular Weight                | The human full length ENTPD2-Strep protein has a MW of 53.7 kDa   |
| Formulation &<br>Reconstitution | Lyophilized from nanodisc solubilization buffer (20<br>mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5%<br>– 8% trehalose is added as protectants before<br>lyophilization. Please see Certificate of Analysis<br>for specific instructions. Do not use solvents with<br>a pH below 6.5 or those containing high<br>concentrations of divalent metal ions (greater<br>than 5 mM) in subsequent experiments. |
| Storage & Shipping              | Store at -20°C to -80°C for 12 months in<br>lyophilized form. After reconstitution, if not<br>intended for use within a month, aliquot and store<br>at -80°C (Avoid repeated freezing and thawing).<br>Lyophilized proteins are shipped at ambient<br>temperature.  |
| Background                      | The protein encoded by this gene is the type 2<br>enzyme of the ecto-nucleoside triphosphate<br>diphosphohydrolase family (E-NTPDase). E-<br>NTPDases are a family of ecto-nucleosidases that<br>hydrolyze 5'-triphosphates. This ecto-ATPase is an<br>integral membrane protein. Alternative splicing of<br>this gene results in multiple transcript variants.<br>[provided by RefSeq, Jul 2008]         |
| Usage                           | Research use only   |
| Conjugate                       | Unconjugated  |
|                                 |   |
