

PRODUCT INFORMATION

C-Flag&Strep Tag Tag

Target FZD7 **Synonyms** FzE3

Formulation & Reconstitution

Storage & Shipping

Background

Human FZD7-Strep full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** 075084 **Expression Host HEK293**

Protein Families Druggable Genome, Transmembrane

Basal cell carcinoma, Colorectal cancer, **Protein Pathways**

Melanogenesis, Pathways in cancer, Wnt signaling

pathway

The human full length FZD7-Strep protein has a **Molecular Weight**

MW of 63.6 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C(Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

Members of the 'frizzled' gene family encode 7transmembrane domain proteins that are receptors for Wnt signaling proteins. The FZD7 protein contains an N-terminal signal sequence, 10 cysteine residues typical of the cysteine-rich extracellular domain of Fz family members, 7

putative transmembrane domains, and an intracellular C-terminal tail with a PDZ domain-binding motif. FZD7 gene expression may downregulate APC function and enhance beta-catenin-mediated signals in poorly differentiated
