

PRODUCT INFORMATION

Tag C-Flag&Strep Tag

Target GCGR

Formulation & Reconstitution

Background

Synonyms GGR; GL-R; MVAH

DescriptionHuman GCGR-Strep full length protein-synthetic

Delivery 6~8weeks
Uniprot ID P47871
Expression Host HEK293

Protein Families Druggable Genome, GPCR, Transmembrane

Protein Pathways Neuroactive ligand-receptor interaction

Molecular Weight

The human full length GCGR-Strep protein has a

MW of 54 kDa

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

Lyophilized from nanodisc solubilization buffer (20

for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater

concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and sto

Storage & Shipping intended for use within a month, aliquot and store at -80°C(Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

témperature.

G-protein coupled receptor for glucagon that plays a central role in the regulation of blood glucose levels and glucose homeostasis. Regulates the rate of hepatic glucose production

by promoting glycogen hydrolysis and gluconeogenesis. Plays an important role in mediating the responses to fasting. Ligand binding causes a conformation change that

triggers signaling via guanine nucleotide-binding proteins (G proteins) and modulates the activity of down-stream effectors, such as adenylate cyclase. Promotes activation of adenylate cyclase. Besides, plays a role in signaling via a phosphatidylinositol-calcium second messenger
