

## **PRODUCT INFORMATION**

**Tag** C-Flag Tag

Target GLRB
Synonyms HKPX2

**Description**Human GLRB full length protein-synthetic

nanodisc

Delivery 6~8weeks

Uniprot ID P48167

Expression Host HEK293

**Protein Families** Ion Channels: Cys-loop Receptors

Protein Pathways N/A

**Background** 

Molecular Weight The human full length GLRB protein has a MW of

56.1kDa
Lyophilized from nanodisc solubilization buffer (20)

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

Formulation & Iyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater

concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

**Storage & Shipping** intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

témperature.

This gene encodes the beta subunit of the glycine receptor, which is a pentamer composed of alpha and beta subunits. The receptor functions as a neurotransmitter-gated ion channel, which produces hyperpolarization via increased chloride conductance due to the binding of glycine to the receptor. Much known as hereditary hyperpolarizations in this gene cause startle

disease, also known as hereditary hyperekplexia or congenital stiff-person syndrome, a disease characterized by muscular rigidity. Alternative splicing results in multiple transcript variants.
