Cat. No. FLP100278

## **PRODUCT INFORMATION**

C-Flag Tag Tag **GP161 Target Synonyms** RE2

Human GP161 full length protein-synthetic **Description** 

nanodisc **Delivery** 6~8weeks **Uniprot ID Q8N6U8 Expression Host HEK293** 

**Protein Families** GPCR, Transmembrane, Druggable Genome,

**Protein Pathways** 

Formulation & Reconstitution

Storage & Shipping

**Background** 

The human full length GP161 protein has a MW of **Molecular Weight** 

58.6kDa Lyophilized from nanodisc solubilization buffer (20

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

témperature.

The protein encoded by this gene is an orphan G protein-coupled receptor whose ligand is unknown. This gene is overexpressed in triplenegative breast cancer, and disruption of this gene slows the proliferation of basal breast

cancer cells. Therefore, this gene is a potential drug target for triple-negative breast cancer. [provided by RefSeq, Mar 2017]
