PRODUCT INFORMATION

C-Flag Tag Tag **Target GP182**

7TMR, ADMR, AM-R, AMR, G10D, L1-R, gamrh, **Synonyms**

hrhAMR

Human GP182 full length protein-synthetic Description

nanodisc 6~8weeks 015218

HEK293 Expression Host

Protein Families GPCR, Transmembrane, Druggable Genome,

Protein Pathways Smooth muscle contraction,

The human full length GP182 protein has a MW of **Molecular Weight**

45.3kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

Reconstitution a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

Adrenomedullin is a potent vasodilator peptide that exerts major effects on cardiovascular

function. This gene encodes a seven-

transmembrane protein that belongs to the family **Background** 1 of G-protein coupled receptors. Studies of the

rat counterpart suggest that the encoded protein may function as a receptor for adrenomedullin.
