

## **PRODUCT INFORMATION**

C-Flag&Strep Tag Tag

**Target** GPBAR1

**Synonyms** BG37, GPCR19, GPR131, M-BAR, TGR5

**HEK293** 

Human GPBAR1-Strep full length protein-synthetic **Description** 

nanodisc **Delivery** 6~8weeks **Uniprot ID** Q8TDU6

**Protein Families** Druggable Genome,

**Protein Pathways** N/A

**Expression Host** 

Storage & Shipping

**Background** 

The human full length GPBAR-Strep protein has a **Molecular Weight** 

MW of 35.2 kDa

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in

Lyophilized from nanodisc solubilization buffer (20

lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

témperature.

This gene encodes a member of the G protein-coupled receptor (GPCR) superfamily. This enzyme functions as a cell surface receptor for bile acids. Treatment of cells expressing this GPCR with bile acids induces the production of intracellular cAMP, activation of a MAP kinase

signaling pathway, and internalization of the receptor. The receptor is implicated in the suppression of macrophage functions and regulation of energy homeostasis by bile acids. Alternative splicing results in multiple transcript variants encoding the same protein. [provided by

RefSeq, Jul 2008]

Research use only **Usage** Conjugate Unconjugated
