Formulation &

Reconstitution

Storage & Shipping

Background

PRODUCT INFORMATION

C-Flag&Strep Tag Tag

GPC5B **Target**

Synonyms RAIG-2, RAIG2

Human GPC5B-Strep full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** Q9NZH0 **Expression Host HEK293**

Protein Families Druggable Genome,

GPCRDB Class C Metabotropic glutamate **Protein Pathways**

pheromone,

The human full length GPC5B-Strep protein has a **Molecular Weight**

MW of 44.8 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a member of the type 3 G protein-coupled receptor family. Members of this superfamily are characterized by a signature 7transmembrane domain motif. The encoded protein may modulate insulin secretion and

increased protein expression is associated with type 2 diabetes. Alternative splicing results in multiple transcript variants. [provided by RefSeq,
