Cat. No. PME101106

## **PRODUCT INFORMATION**

**Target** GPRC5A

**Synonyms** PEIG-1; RAIG-1

Recombinant human GPRC5A protein with C-**Description** 

terminal mouse Fc tag

**Delivery** In Stock **Uniprot ID** Q8NFJ5 **Expression Host HEK293** 

Tag C-Mouse Fc Tag

Molecular

**Molecular Weight** 

**Background** 

GPRC5A(Met1-Thr33) mFc(Pro99-Lys330) Characterization

The protein has a predicted molecular mass of

29.9 kDa after removal of the signal peptide. The apparent molecular mass of GPRC5A-mFc is approximately 25-35 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation & Reconstitution

- 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions of reconstitution.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a member of the type 3 G protein-coupling receptor family, characterized by the signature 7-transmembrane domain motif.

The encoded protein may be involved in interaction between retinoid acid and G protein

signalling pathways. Retinoic acid plays a critical role in development, cellular growth, and differentiation. This gene may play a role in embryonic development and epithelial cell differentiation. [provided by RefSeq, Jul 2008]
