

## **PRODUCT INFORMATION**

C-Flag Tag Tag

**Target** GRL1

**Synonyms** GCOM1, GRINL1A, Gdown, Gdown1

Human GRL1 full length protein-synthetic **Description** 

nanodisc **Delivery** 6~8weeks **Uniprot ID** P0CAP2

**Expression Host HEK293** 

**Protein Families** Ion Channels: Other

**Protein Pathways** N/A

The human full length GRL1 protein has a MW of **Molecular Weight** 

41.7kDa Lyophilized from nanodisc solubilization buffer (20

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

témperature.

This gene encodes a subunit of a specific form of RNA polymerase II termed Pol II(G). The encoded protein may act as a negative regulator of transcriptional activation by the Mediator

complex. Alternative splicing results in multiple transcript variants. There is a pseudogene for this gene on chromosome 4. Readthrough transcription between the same and the saighboring upstream gene MYZAR (mygografial

neighboring upstream gene MYZAP (myocardial zonula adherens protein) is represented with GeneID 145781. [provided by RefSeq, Oct 2013]
