**Delivery** 

**Background** 

## **PRODUCT INFORMATION**

**Target** GRM6

CSNB1B, GPRC1F, MGLUR6, mGlu6 **Synonyms** 

Human GRM6 full length protein-synthetic **Description** 

nanodisc 6~8weeks

**Uniprot ID** 015303 **Expression Host HEK293** 

**Protein Families** Transmembrane, Druggable Genome, GPCRDB Class C Metabotropic glutamate **Protein Pathways** 

pheromone.

The human full length GRM6 protein has a MW of **Molecular Weight** 

95.5kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & Reconstitution

lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with pH lower than 6.5 in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

L-glutamate is the major excitatory

neurotransmitter in the central nervous system and activates both ionotropic and metabotropic

glutamate receptors. Glutamatergic

neurotransmission is involved in most aspects of normal brain function and can be perturbed in many neuropathologic conditions. The

metabotropic glutamate receptors are a family of G protein-coupled receptors, that have been divided into 3 groups on the basis of sequence

homology, putative signal transduction mechanisms, and pharmacologic properties. Group I includes GRM1 and GRM5 and these

receptors have been shown to activate phospholipase C. Group II includes GRM2 and GRM3 while Group III includes GRM4, GRM6, GRM7 and GRM8. Group II and III receptors are linked to the inhibition of the cyclic AMP cascade but differ in their agonist selectivities. Mutations in this gene result in congenital stationary night blindness type 1B. [provided by RefSeq, May
