Delivery

Formulation & Reconstitution

Background

PRODUCT INFORMATION

Tag C-Flag Tag

Target KCAB1

Synonyms AKR6A3, KCNA1B, KV-BETA-1, Kvb1.3, hKvBeta3,

hKvb3

DescriptionHuman KCAB1 full length protein-synthetic

nanodisc 6~8weeks Q14722

Uniprot ID Q14722 Expression Host HEK293

Protein Families Ion Channels: Other

Protein Pathways N/A

Molecular Weight

The human full length KCAB1 protein has a MW of

46.6kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

Storage & Shipping intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

Potassium channels represent the most complex class of voltage-gated ion channels from both functional and structural standpoints. Their diverse functions include regulating

neurotransmitter release, heart rate, insulin secretion, neuronal excitability, epithelial electrolyte transport, smooth muscle contraction,

and cell volume. Four sequence-related

potassium channel genes - shaker, shaw, shab, and shal - have been identified in Drosophila, and each has been shown to have human homolog(s).

This gene encodes a member of the potassium channel, voltage-gated, shaker-related subfamily. This member includes distinct isoforms which are encoded by alternatively spliced transcript variants of this gene. Some of these isoforms are beta subunits, which form heteromultimeric complexes with alpha subunits and modulate the

activity of the pore-forming alpha subunits.
