

## **PRODUCT INFORMATION**

Tag C-Flag Tag
Target KCAB3

Synonyms AKR6A9, KCNA3.1B, KCNA3B, KV-BETA-3

Human KCAB3 full length protein-synthetic

Delivery 6~8weeks
Uniprot ID 043448
Expression Host HEK293

**Protein Families** Ion Channels: Other

Protein Pathways N/A

Formulation & Reconstitution

Storage & Shipping

**Background** 

Molecular Weight

The human full length KCAB3 protein has a MW of

43.7kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a member of the potassium channel, voltage-gated, shaker-related subfamily. The encoded protein is one of the beta subunits, which are auxiliary proteins associating with functional Kv-alpha subunits. The encoded protein forms a beta-adjust with the protein protein protein forms a beta-adjust with the protein protein forms a beta-adjust with the protein protein protein forms a beta-adjust with the protein pro

forms a heterodimer with the potassium voltagegated channel, shaker-related subfamily, member 5 gene product and regulates the activity of the alpha subunit. [provided by RefSeq, May 2012]
