

## **PRODUCT INFORMATION**

Тад	C-Flag Tag
Target	KCIP1
Synonyms	KCHIP1, VABP
Description	Human KCIP1 full length protein-synthetic nanodisc
Delivery	6~8weeks
Uniprot ID	Q9NZI2
Expression Host	HEK293
<b>Protein Families</b>	Ion Channels: Other
Protein Pathways	N/A
Molecular Weight	The human full length KCIP1 protein has a MW of
Formulation & Reconstitution Storage & Shipping	Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid reneated freezing and thawing)
2 2	Lyophilized proteins are shipped at ambient temperature.
Background	This gene encodes a member of the family of cytosolic voltage-gated potassium (Kv) channel- interacting proteins (KCNIPs), which belong to the neuronal calcium sensor (NCS) family of the calcium binding EF-hand proteins. They associate with Kv4 alpha subunits to form native Kv4 channel complexes. The encoded protein may regulate rapidly inactivating (A-type) currents, and hence neuronal membrane excitability, in response to changes in the concentration of intracellular calcium. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, May 2013]
Usage	Research use only
Conjugate	Unconjugated
