

## **PRODUCT INFORMATION**

C-Flag&Strep Tag Tag

**Target** KCMB1

BKbeta1, K(VCA)beta, SLO-BETA, hbeta1, hslo-**Synonyms** 

beta, k(VCA)beta-1, slo-beta-1

Human KCMB1-Strep full length protein-synthetic Description

nanodisc

**Delivery** 6~8weeks **Uniprot ID** Q16558 HEK293 **Expression Host** 

**Protein Families** Ion Channels: Other

**Protein Pathways** 

Storage & Shipping

**Background** 

The human full length KCMB1-Strep protein has a **Molecular Weight** 

MW of 21.8 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before Formulation & lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

Reconstitution a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

MaxiK channels are large conductance, voltage and calcium-sensitive potassium channels which are fundamental to the control of smooth muscle tone and neuronal excitability. MaxiK channels can be formed by 2 subunits: the pore-forming alpha subunit and the product of this gene, the modulatory beta subunit. Intracellular calcium

regulates the physical association between the alpha and beta subunits. [provided by RefSeq, Jul

20081

Usage Research use only

Conjugate Unconjugated
