

PRODUCT INFORMATION

Tag C-Flag&Strep Tag

Target KCNE1

Synonyms ISK, JLNS, JLNS2, LQT2/5, LQT5, MinK

Human KCNE1-Strep full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** P15382

Expression Host HEK293

Protein Families Ion Channels: Other

Protein Pathways N/A

Storage & Shipping

Background

The human full length KCNE1-Strep protein has a **Molecular Weight**

MW of 14.7 kDa Lyophilized from nanodisc solubilization buffer (20

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in

lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

temperature.

The product of this gene belongs to the potassium channel KCNE family. Potassium ion channels are essential to many cellular functions and show a high degree of diversity, varying in their electrophysiologic and pharmacologic properties. This gene encodes a transmembrane protein known to associate with the product of the KVLQT1 gene to form the delayed rectifier

> Email: info@dimabio.com Website: www.dimabio.com

potassium channel. Mutation in this gene are associated with both Jervell and Lange-Nielsen and Romano-Ward forms of long-QT syndrome. Alternatively spliced transcript variants encoding the same protein have been identified. [provided

by RefSeq, Jul 2008]

Usage Research use only

Conjugate Unconjugated
