Cat. No. PME101417

PRODUCT INFORMATION

Target LEP

Synonyms OB; OBS; LEPD

Recombinant human LEP Protein with C-terminal Description

human Fc tag

Delivery In Stock **Uniprot ID** P41159 **Expression Host HEK293**

Tag C-Human Fc tag

Molecular

Background

LEP(Val22-Cys167) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of

42.2 kDa after removal of the signal peptide. The apparent molecular mass of LEP-hFc is **Molecular Weight**

approximately 35-55 kDa due to glycosylation.

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

Storage & Shipping at -80°C (Avoid repeated freezing and thawing).Lyophilized proteins are shipped at

ambient temperature.

This gene encodes a protein that is secreted by white adipocytes into the circulation and plays a

major role in the regulation of energy homeostasis. Circulating leptin binds to the leptin receptor in the brain, which activates downstream signaling pathways that inhibit feeding and promote energy expenditure. This protein also has several endocrine functions, and

is involved in the regulation of immune and

inflammatory responses, hematopoiesis, angiogenesis, reproduction, bone formation and wound healing. Mutations in this gene and its regulatory regions cause severe obesity and morbid obesity with hypogonadism in human patients. A mutation in this gene has also been linked to type 2 diabetes mellitus development. [provided by RefSeq, Aug 2017]
