

PRODUCT INFORMATION

C-Flag&Strep Tag Tag

Target LPAR2

Formulation &

Reconstitution

Storage & Shipping

Background

Synonyms EDG-4, EDG4, LPA-2, LPA2

Human LPAR2-Strep full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** Q9HBW0 **Expression Host HEK293**

Protein Families GPCR, Transmembrane, Druggable Genome,

Cancer, G-Protein Coupled Receptors Signaling **Protein Pathways**

The human full length LPAR2-Strep protein has a **Molecular Weight**

MW of 38.7 kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a member of family I of the G protein-coupled receptors, as well as the EDG family of proteins. This protein functions as a lysophosphatidic acid (LPA) receptor and

contributes to Ca2 mobilization, a critical cellular response to LPA in cells, through association with Gi and Gq proteins. An alternative splice variant

has been described but its full length sequence has not been determined. [provided by RefSeq,
