

## **PRODUCT INFORMATION**

C-Flag Tag Tag MTR1B **Target** 

**Synonyms** FGQTL2, MEL-1B-R, MT2

Human MTR1B full length protein-synthetic **Description** 

nanodisc **Delivery** 6~8weeks **Uniprot ID** P49286 **Expression Host HEK293** 

Formulation &

Storage & Shipping

**Background** 

**Protein Families** Transmembrane, Druggable Genome,

GPCRDB Class A Rhodopsin-like, Small ligand **Protein Pathways** 

GPCRs, Cancer,

The human full length MTR1B protein has a MW of **Molecular Weight** 

40.2kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis for specific instructions. Do not use solvents with

Reconstitution a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes one of two high affinity forms of a receptor for melatonin, the primary hormone secreted by the pineal gland. This gene product is an integral membrane protein that is a G-protein coupled, 7-transmembrane receptor. It is found primarily in the retina and brain although this detection requires RT-PCR. It is thought to

participate in light-dependent functions in the retina and may be involved in the neurobiological effects of melatonin. [provided by RefSeq, Jul'

20081
