Cat. No. PME101455

## **PRODUCT INFORMATION**

NPY **Target** PYY4 **Synonyms** 

Recombinant human NPY Protein with C-terminal **Description** 

human Fc tag

**Delivery** In Stock **Uniprot ID** P01303 **Expression Host HEK293** 

Tag C-Human Fc tag

Molecular

**Background** 

NPY(Tyr29-Trp97) hFc(Glu99-Ala330) Characterization

The protein has a predicted molecular mass of **Molecular Weight** 

34.2 kDa after removal of the signal peptide. The apparent molecular mass of NPY-hFc is

approximately 35-55 kDa due to glycosylation. The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

Purity

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions of reconstitution. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes a neuropeptide that is widely expressed in the central nervous system and influences many physiological processes, including cortical excitability, stress response, food intake, circadian rhythms, and cardiovascular function. The neuropeptide functions through G protein-coupled receptors to

inhibit adenylyl cyclase, activate mitogen-

activated protein kinase (MAPK), regulate intracellular calcium levels, and activate

potassium channels. A polymorphism in this gene resulting in a change of leucine 7 to proline in the

signal peptide is associated with elevated cholesterol levels, higher alcohol consumption, and may be a risk factor for various metabolic and cardiovascular diseases. The protein also exhibits antimicrobial activity against bacteria

and fungi. [provided by RefSeq, Oct 2014]

**Usage** Research use only

Conjugate Unconjugated
