Cat. No. FLP100376

Delivery

Background

PRODUCT INFORMATION

Tag C-Flag Tag **Target** O51E1

D-GPCR, DGPCR, GPR136, GPR164, OR51E1P, **Synonyms**

OR52A3P, POGR, PSGR2

Human O51E1 full length protein-synthetic Description

nanodisc 6~8weeks Q8TCB6

Uniprot ID HEK293 Expression Host

Protein Families GPCR, Transmembrane, Druggable Genome,

Protein Pathways

The human full length O51E1 protein has a MW of **Molecular Weight**

35.3kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

Formulation & Reconstitution for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

Storage & Shipping at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal response that triggers the perception of a smell. The olfactory receptor proteins are members of a large family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory receptors share a 7-transmembrane domain structure with many neurotransmitter and hormone receptors and are responsible for the

recognition and G protein-mediated transduction of odorant signals. The olfactory receptor gene family is the largest in the genome. The nomenclature assigned to the olfactory receptor genes and proteins for this organism is

independent of other organisms. [provided by

RefSeq, Jul 2008] Research use only

Usage Conjugate Unconjugated
