

PRODUCT INFORMATION

C-Flag Tag Tag

OPN5 **Target**

Synonyms GPR136, GRP136, PGR12, TMEM13

Human OPN5 full length protein-synthetic **Description**

nanodisc **Delivery** 6~8weeks **Uniprot ID** Q6U736 **Expression Host HEK293**

Transmembrane, Druggable Genome, **Protein Families**

Protein Pathways

Storage & Shipping

The human full length OPN5 protein has a MW of **Molecular Weight**

39.7kDa Lyophilized from nanodisc solubilization buffer (20

mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Formulation & Reconstitution

for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient

témperature.

Opsins are members of the guanine nucleotidebinding protein (G protein)-coupled receptor superfamily. This opsin gene is expressed in the eye, brain, testes, and spinal cord. This gene

belongs to the seven-exon subfamily of

mammalian opsin genes that includes peropsin (RRH) and retinal G protein coupled receptor (RGR). Like these other seven-exon opsin genes, **Background**

this family member may encode a protein with photoisomerase activity. Alternative splicing results in multiple transcript variants. [provided
