

## **PRODUCT INFORMATION**

C-Flag Tag Tag

**Target PACR** 

Formulation &

Storage & Shipping

**Background** 

**Synonyms** PAC1, PAC1R, PACAPR, PACAPRI

Human PACR full length protein-synthetic **Description** 

nanodisc **Delivery** 6~8weeks **Uniprot ID** P41586 **Expression Host HEK293** 

**Protein Families** GPCR, Transmembrane, Druggable Genome,

GPCRDB Class B Secretin-**Protein Pathways** 

like, Cancer, Neurotrophin & Receptors,

The human full length PACR protein has a MW of **Molecular Weight** 

53.3kDa

Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis

Reconstitution for specific instructions. Do not use solvents with a pH below 6.5 or those containing high concentrations of divalent metal ions (greater than 5 mM) in subsequent experiments. Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store

at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient

temperature.

This gene encodes type I adenylate cyclase activating polypeptide receptor, which is a membrane-associated protein and shares significant homology with members of the glucagon/secretin receptor family. This receptor

mediates diverse biological actions of adenylate cyclase activating polypeptide 1 and is positively

coupled to adenylate cyclase. Multiple

alternatively spliced transcript variants encoding distinct isoforms have been identified. [provided by RefSeq, Dec 2010]

Usage Research use only

Unconjugated Conjugate
